mergency evacuation routes clear of obstruction mergency exit doors unlocked, easy to open and open fully	
mergency exit doors unlocked, easy to open and open fully	
morganicy lighting available in the event of a newer failure*	
hergericy lighting available in the event of a power failure	
noke and fire detection installed**	
arm system for emergency warning**	
re extinguishers available	
enue has emergency evacuation arrangements – where the venue does not have suitable arrangements we	
ould implement our own – roles and responsibilities clearly defined	
t Aid provision***	
ccess for non-ambulant (disabled) people	
propriate level of security – dependant on local conditions****	
dequate security arrangements for storing question papers and scripts at the venue in accordance with BC and	
varding body regulations.	
afe access for staff with exam papers in order to avoid injury e.g. avoiding carrying heavy cases up stairs etc.	
dequate, hygienic WC facilities	1

Venues for one to one exams for under 18's should be rooms which are visible from the outside, either through a	
glass panel in the door or by using a ground floor room with large windows. Hotel rooms should be avoided.	
Venues for exams for under 18s must have a safe waiting area for young learners to congregate in before and	
after the exam. If adults and children are attending the same exam sitting, the waiting area should be separate	
from the waiting area for adults.	
Where under 18s cannot be dropped off at and collected from the safe waiting area, an additional safe drop	
off/collection area at the entrance to the venue where there is no risk from traffic and where their arrival and	
collection can be supervised must be provided.	
Contractual aspects	
Has the partner venue provided a copy of the proposed contract?	
Does the partner venue carry sufficient insurance cover? (ex. "responsabilité civile professionnelle et	
d'exploitation")?	
Who has provided final approval for the contract to be signed?	
Notes	
* In circumstances where emergency lighting unavailable, it could be provided by battery operated units or	
torches.	
** In circumstance where there is no automatic smoke or fire detection and alarm, it should be provided, either by
